

UCR Science and Technology Studies (STS) Workshop Series

The UCR Science and Technology Initiative will host a series of workshops to advance an interdisciplinary dialogue by UCR faculty across colleges about existing Science and Technology Studies (STS) knowledge and research. The participants will share interdisciplinary ways of knowing regarding STS and help to define the challenges, expectations, and possible future viability of a more integrative teaching and research model. The outcomes of these workshops will include creating new synergies across disciplines and with Island Empire communities. The workshops are intended to promote the collaborative research and problem solving that will support UCR's goal to serve as a global partner and premier research institution in the international field of STS Studies.

Faculty Coordinators

Linda Hall (Anthropology)

Yolanda Moses (Anthropology)
